Are you the picture of health?

"Colorectal cancer is the 2nd leading cancer killer among men and women. But it doesn't have to be."

Katie Couric, Co-Founder
EIF's National Colorectal Cancer Research Alliance

Colorectal cancer and precancerous polyps don't always cause symptoms. So you can look healthy and feel fine and not know there's a problem.

Screening helps find polyps so they can be removed before they turn into colorectal cancer. This is one cancer you can prevent! Screening also can find colorectal cancer early, when treatment often leads to a cure.

So, get your mammogram. Get your Pap test. And, if you're 50 or older, get screened for colorectal cancer. Make sure you really are the picture of health!
